Introduction

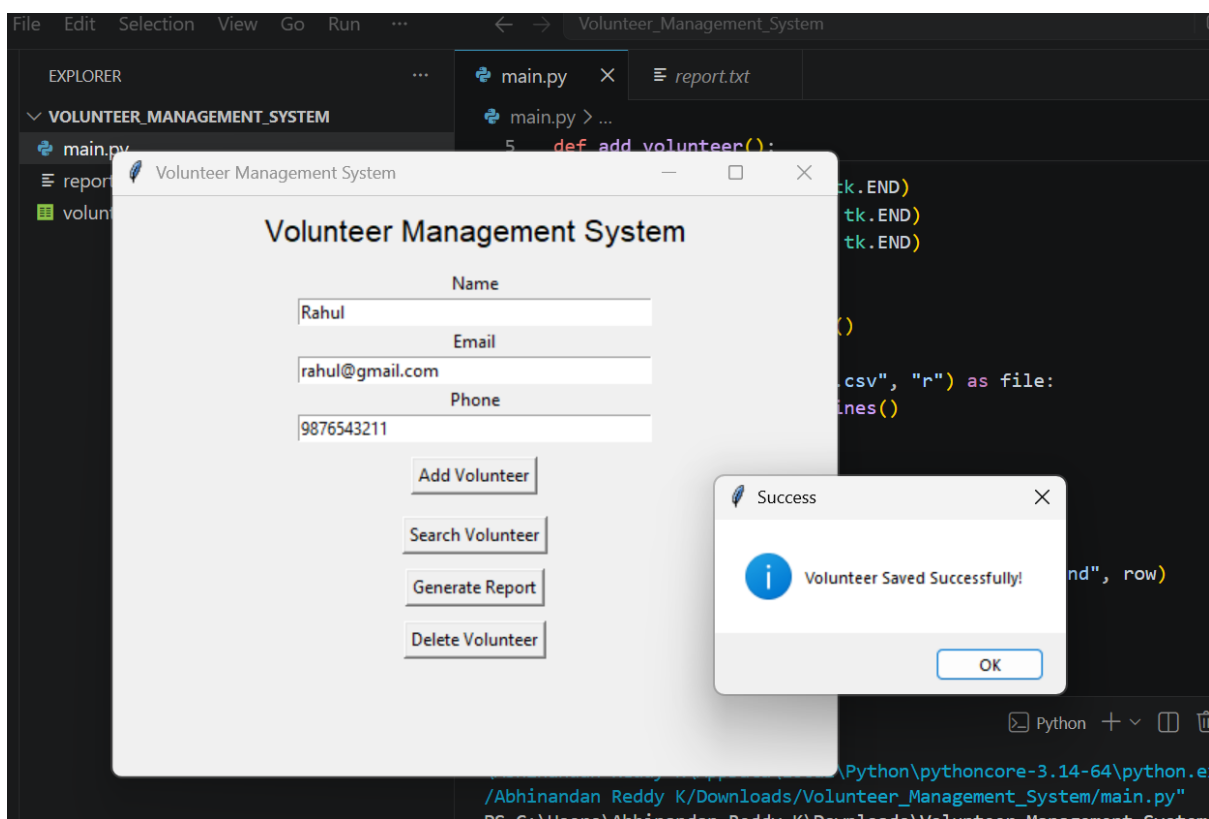

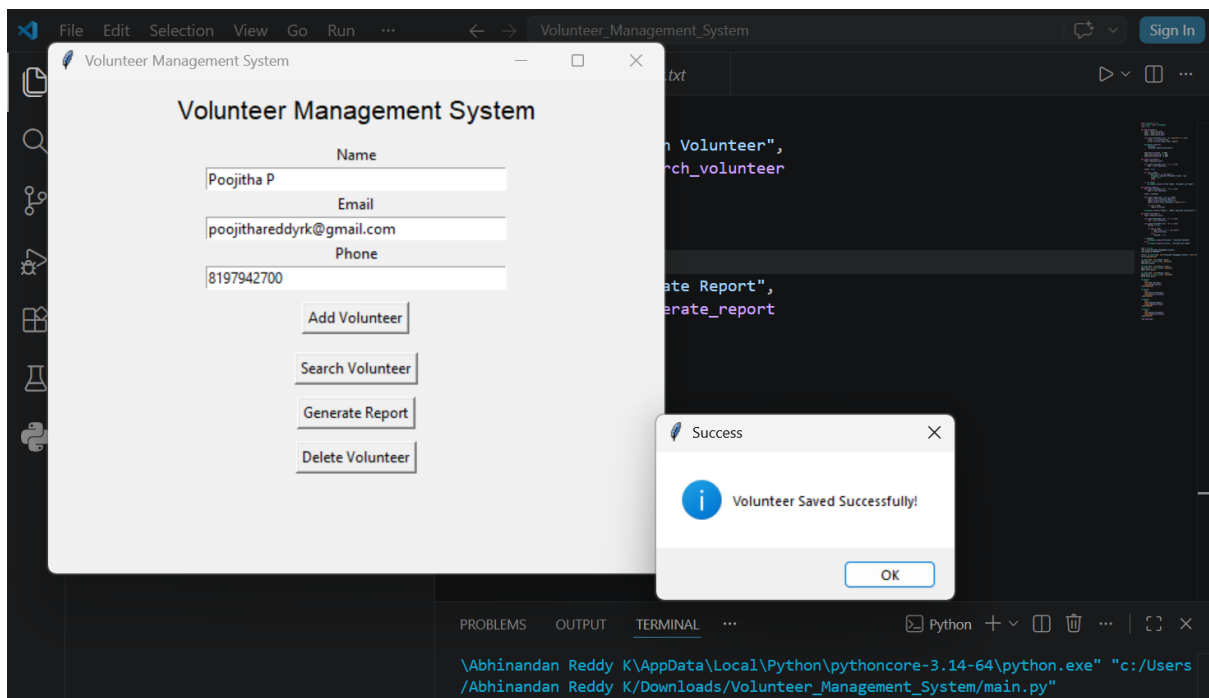

The Volunteer Management System is a simple Python application developed using Tkinter. It helps organizations manage volunteer information efficiently by providing features such as volunteer registration, data storage, search, deletion, and report generation. The following screenshots demonstrate the working and functionality of the system.

Screenshot 1: Main Application Window

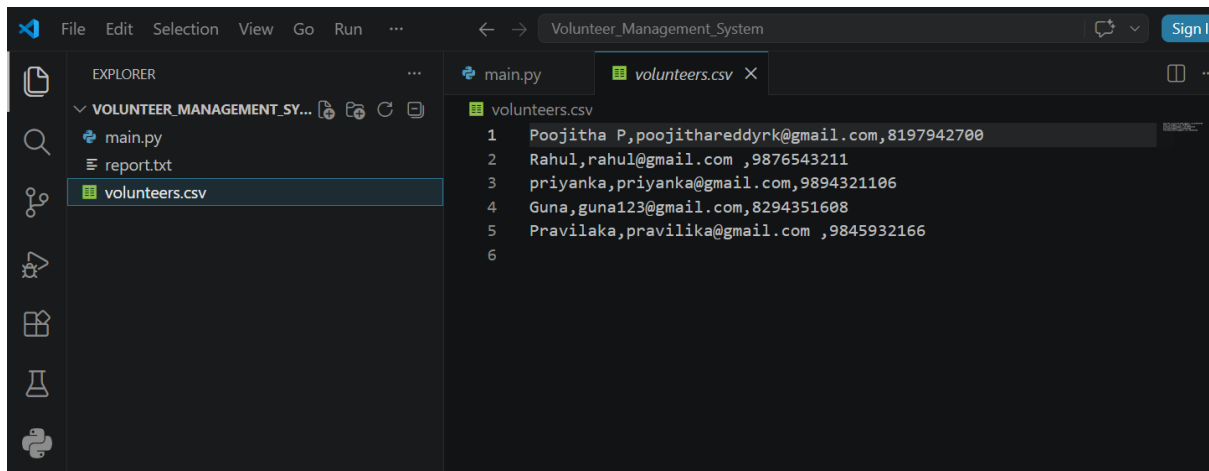

This screenshot shows the main user interface of the Volunteer Management System developed using Python Tkinter. The application provides input fields for entering volunteer details such as name, email address, and phone number.

Screenshot 2: Add Volunteer Feature

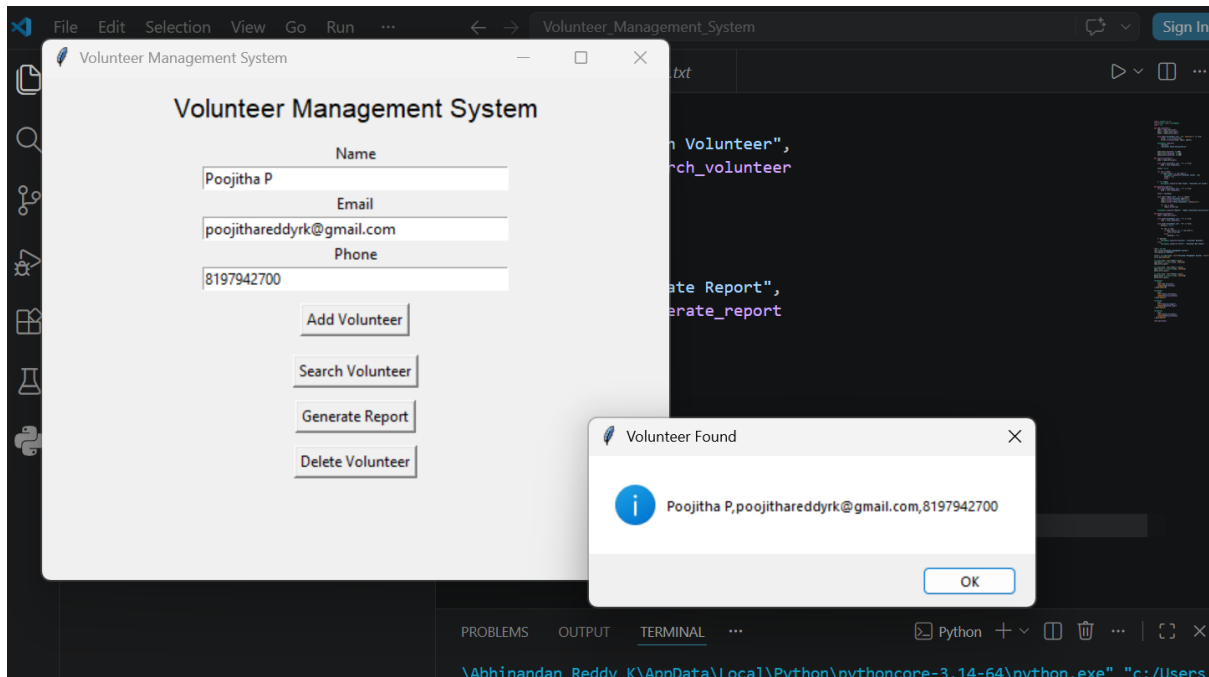

This screenshot demonstrates the Add Volunteer functionality. Users can enter volunteer information and save it into the system. A success message is displayed after the data is stored successfully.

Screenshot 3: Volunteer Data Stored in CSV File

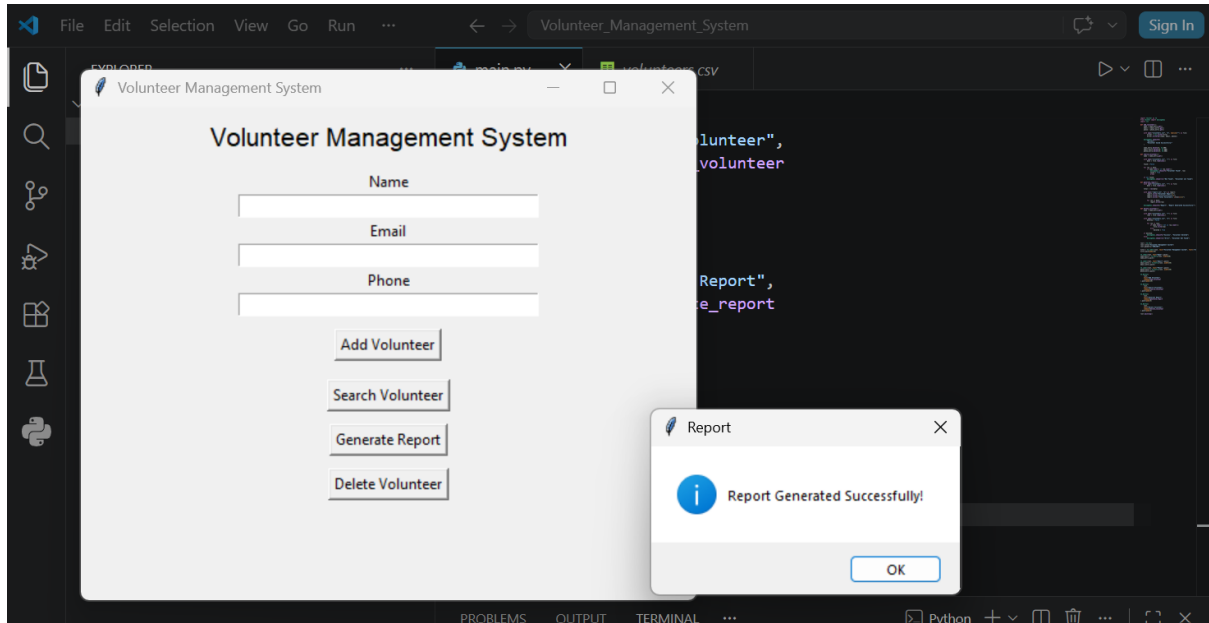

This screenshot shows the volunteers.csv file where volunteer records are stored. The system automatically saves volunteer information, making it easy to manage and access records later.

Screenshot 4: Search Volunteer Feature

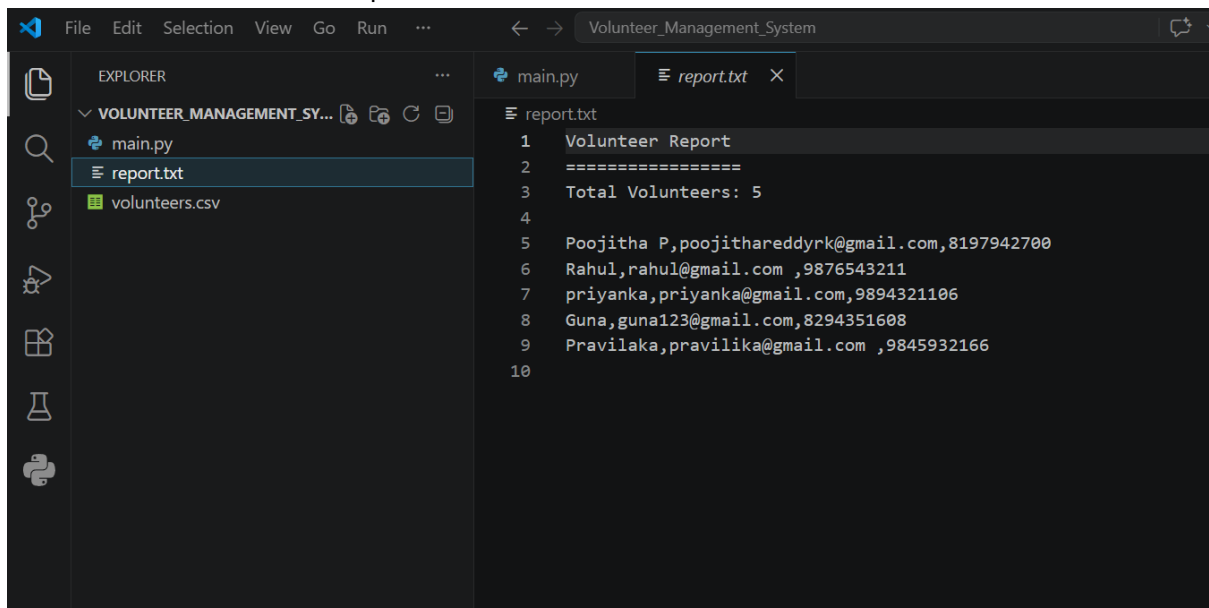

This screenshot demonstrates the search functionality. Users can search for a volunteer by entering the volunteer's name. If the record exists, the system displays the volunteer information.

Screenshot 5: Generate Report Feature

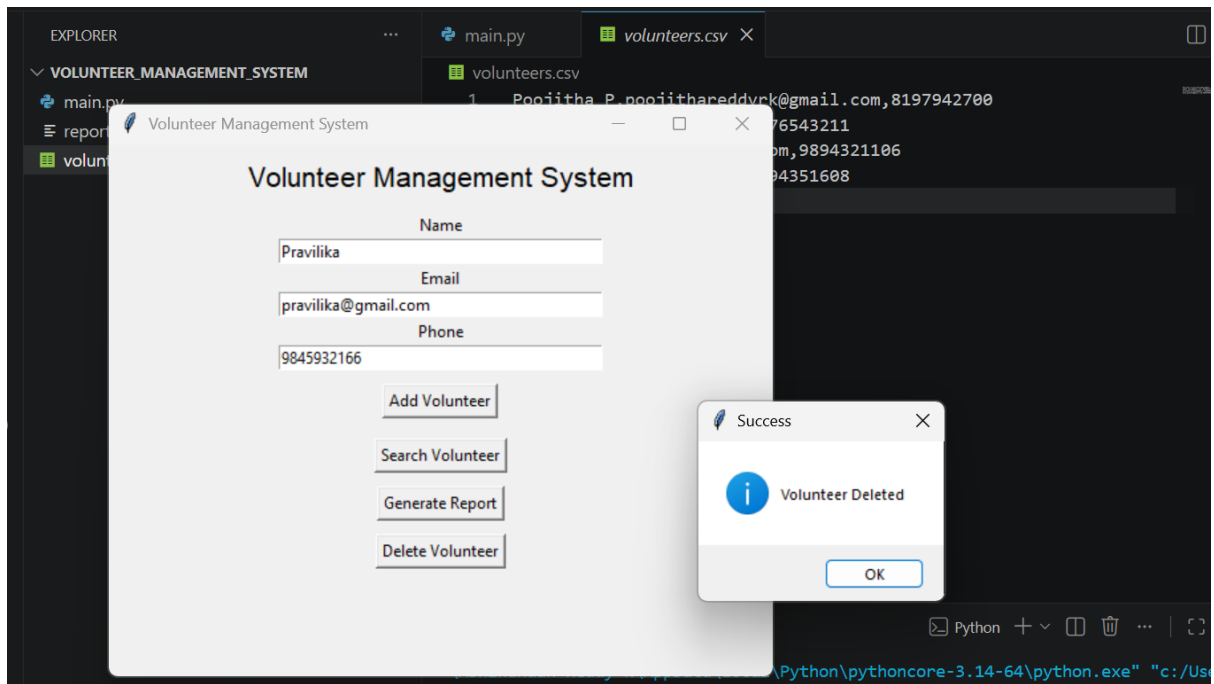

This screenshot shows the report generation functionality. By clicking the Generate Report button, the system creates a report containing volunteer information and a summary of the stored records.

Screenshot 6: Generated Report File

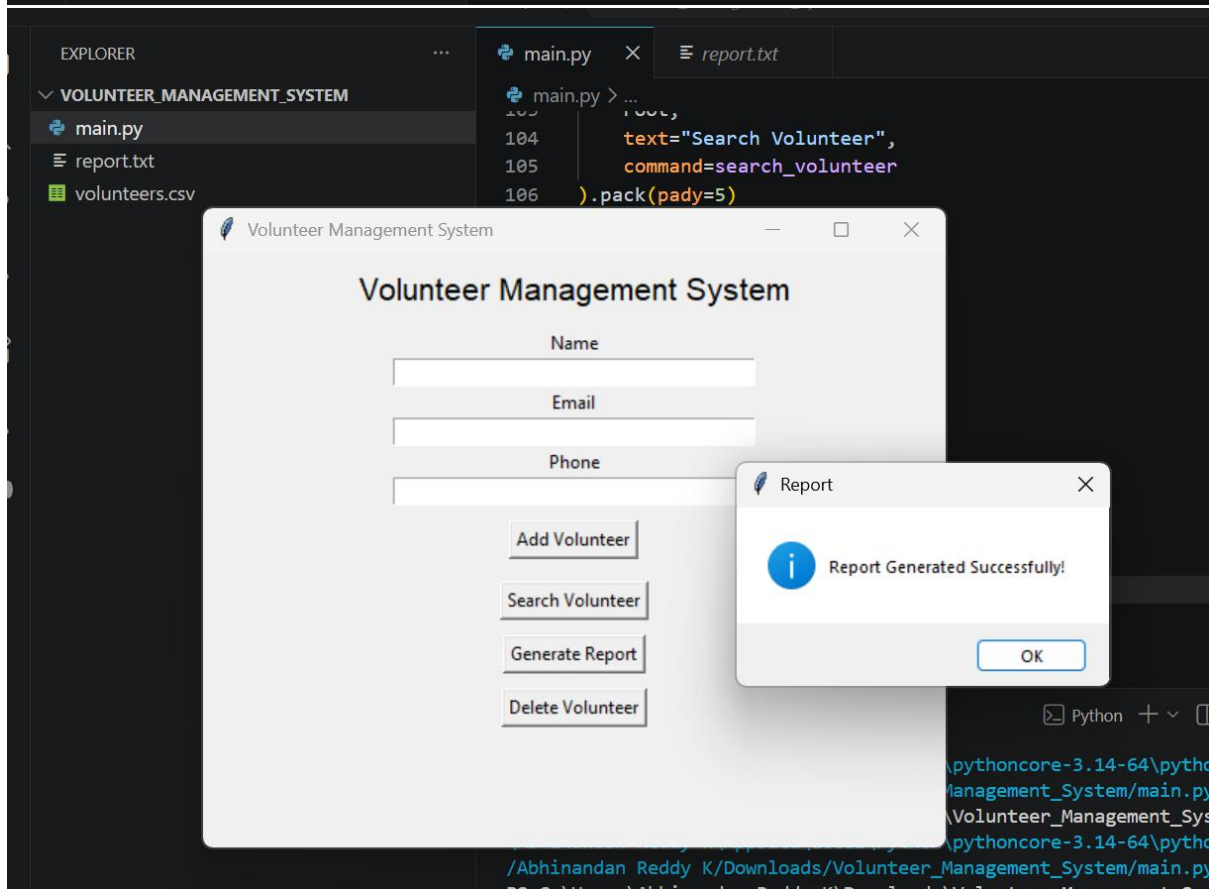

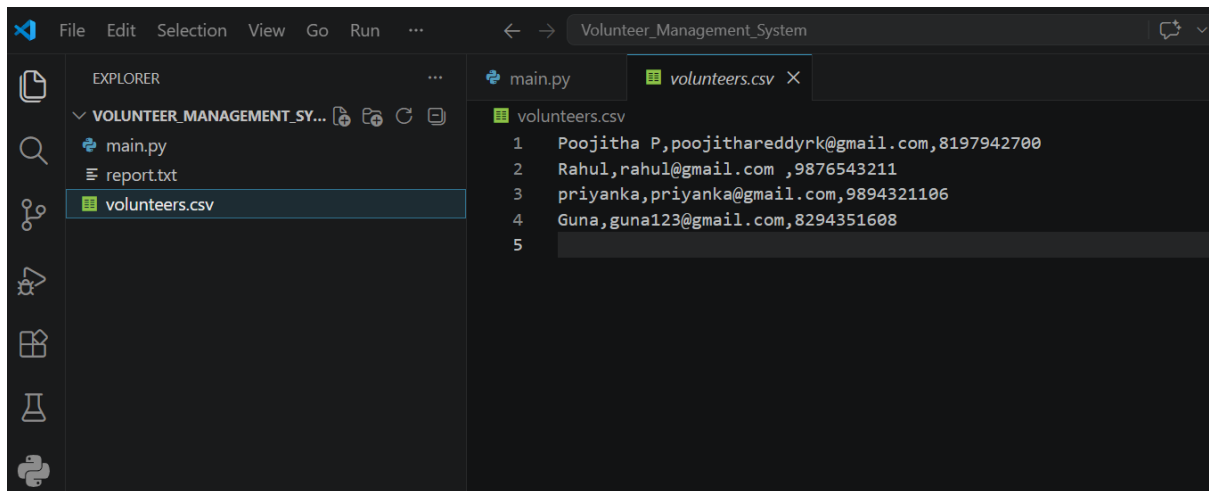

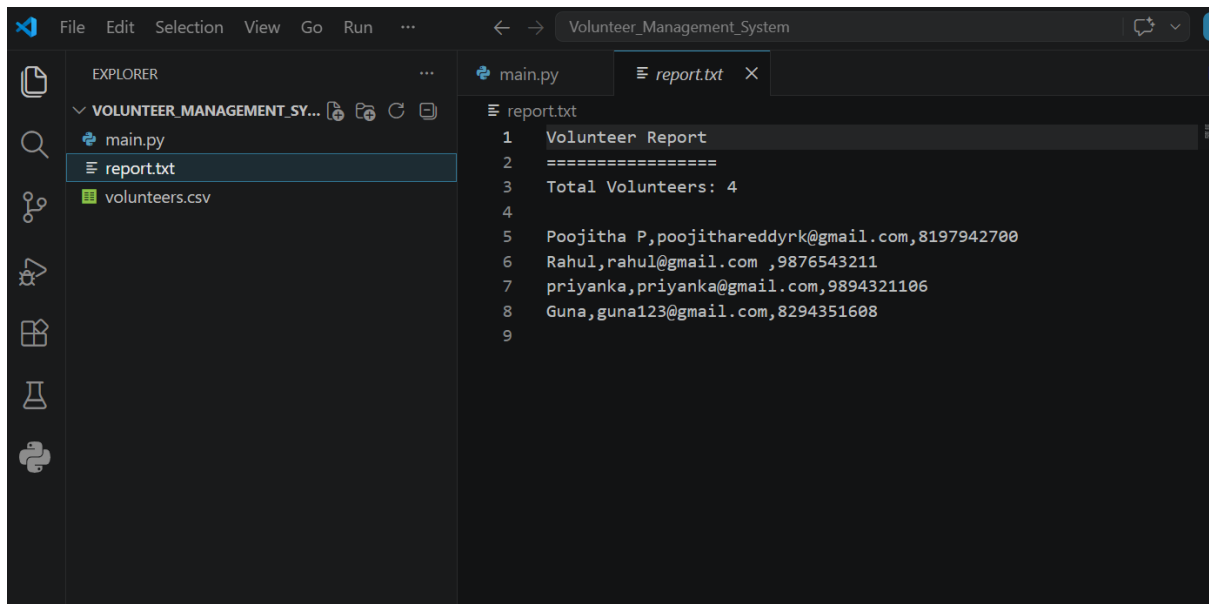

This screenshot displays the generated report.txt file. The report provides details of registered volunteers and helps administrators maintain records efficiently.

Screenshot 7: Delete Volunteer Feature

This screenshot demonstrates the delete functionality. Users can remove volunteer records from the system by entering the volunteer name and clicking the Delete Volunteer button.

The screenshot shows a Python IDE with a dark theme. The Explorer panel on the left shows a project named 'VOLUNTEER_MANAGEMENT_SY...' containing files 'main.py', 'report.txt', and 'volunteers.csv'. The 'report.txt' file is selected and its contents are displayed in the editor. The report text is as follows:

```
1 Volunteer Report
2 =====
3 Total Volunteers: 4
4
5 Poojitha P,poojithareddy@gmail.com,8197942700
6 Rahul,rahul@gmail.com ,9876543211
7 priyanka,priyanka@gmail.com,9894321106
8 Guna,guna123@gmail.com,8294351608
9
```

Conclusion

The Volunteer Management System is a Python-based application developed using Tkinter and CSV files. The system allows users to add, search, delete, and manage volunteer information efficiently. It also generates reports automatically, making volunteer record management simple and organized.
